EXPERIMENTAL FARM NOTES.

---

THE GERMINATING POWER

OF

GRAIN GROWN IN CANADA

DURING THE SEASON OF 1893.

---

By Wm. SAUNDERS, *Director, Experimental Farms.*

---

The question as to the vitality and germinating power of seed grain is a most important one for farmers, and associated with this is that of the relative vigour of the young plants after the seeds have started. These qualities in the seed will necessarily have a large influence on the crop of the coming year.

The testing of the germinating power and vigour of samples of grain grown in the several provinces of the Dominion during 1893 began on the 9th of December, 1893, and since that date 1,153 samples have been placed under test. The testing is conducted in duplicate ; in one case the grain is planted in the soil, in the other in a suitable apparatus between folds of linen kept constantly moist. With 686 samples the tests are now completed, and while thus far the average vitality stands higher than in the crop of 1892, which is very gratifying, there is, nevertheless, a serious drawback in connection with the samples of barley which have been received from Manitoba, the North-west Territories, New Brunswick and Quebec in the unusually large proportion of plants of weak growth. The percentage is small in the samples from Prince Edward Island, Nova Scotia, Ontario and British Columbia.

The following table shows the number of tests thus far completed in each of the provinces of the Dominion with wheat,

1893  
3819

barley and oats, giving the highest, lowest and average percentages of vitality, also the proportion of plants of strong and weak growth :

## ONTARIO.

Kind of Grain.	Number of Tests.	Highest Percentage.	Lowest Percentage.	Percentage of Strong Growth.	Percentage of Weak Growth.	Average Vitality.
Wheat .....	41	100·0	69·0	96·5	3·5	94·0
Barley.....	54	100·0	50·0	79·0	13·5	92·5
Oats.....	50	100·0	84·0	92·9	4·0	96·9

## QUEBEC.

Wheat .....	68	100·0	60·0	85·3	5·0	90·3
Barley.....	107	100·0	47·0	54·6	33·5	88·1
Oats.....	50	100·0	63·0	89·9	3·5	93·4

## MANITOBA.

Wheat .....	14	100·0	28·0	89·2	2·2	91·4
Barley.....	5	99·0	75·0	31·2	61·2	92·4
Oats.....	16	100·0	50·0	87·6	6·7	94·3

## NORTH-WEST TERRITORIES.

Wheat.....	3	98·0	96·0	85·5	11·5	97·0
Barley.....	3	99·0	98·0	44·6	54·0	98·6
Oats.....	12	100·0	60·0	86·2	7·0	93·2

## NOVA SCOTIA.

Wheat.....	12	100·0	59·0	82·4	5·0	87·4
Barley.....	30	100·0	63·0	76·8	11·7	88·5
Oats.....	49	100·0	52·0	85·6	5·9	91·5

## NEW BRUNSWICK.

Kind of Grain.	Number of Tests.	Highest Percentage.	Lowest Percentage.	Percent-age of Strong Growth.	Percent-age of Weak Growth.	Average Vitality.
Wheat .....	22	100·0	54·0	83·3	4·6	87·9
Barley.....	18	99·0	76·0	38·1	53·7	91·8
Oats.....	75	100·0	78·0	90·9	5·3	96·2

## PRINCE EDWARD ISLAND.

Wheat.....	13	97·0	59·0	82·6	5·7	88·3
Barley.....	5	96·0	84·0	87·2	4·2	91·4
Oats.....	19	100·0	76·0	86·6	6·1	92·7

## BRITISH COLUMBIA.

Wheat .....	6	100·0	96·0	91·4	6·0	97·4
Barley.....	7	100·0	96·0	97·1	0·9	98·0
Oats.....	8	100·0	94·0	95·6	1·2	96·8

## RECAPITULATION.

Kind of Grain.	Number of Tests.	Highest Percentage.	Lowest Percentage.	Average Strong Growth.	Average Weak Growth.	Average Vitality.
Wheat .....	178	100·0	28·0	86·4	4·5	90·9
Barley.....	229	100·0	47·0	63·4	26·7	90·1
Oats .....	279	100·0	50·0	89·6	5·0	94·6
Total .. ....	686	Average vitality of the whole.....				
						91·9

It is doubtful if any other country in the world could show so high an average as 91·9 per cent in 686 tests of samples received

indiscriminately from all parts of its territory, especially since many of these were sent because they were suspected of being deficient in germinating power.

The provinces and territories at present stand thus in order of merit :

	No. of Samples Tested.	Average Vitality.
British Columbia.. . . . .	21	97.4
North-west Territories.. . . .	18	96.3
Ontario.. . . . .	145	94.5
Manitoba.. . . . .	35	92.7
New Brunswick.. . . . .	115	92.
Prince Edward Island.. . . .	37	90.8
Quebec.. . . . .	225	90.6
Nova Scotia.. . . . .	91	89.1

The fact that in this series of tests samples of wheat have gone as low as 28 per cent, barley 47 per cent, and oats 50 per cent, should be sufficient to induce those farmers who are holding seed of doubtful vitality for spring sowing to send samples at once to the Central Experimental Farm so that they may be tested and reported on before the time for seeding arrives. These samples are tested free of charge, and the reports of the results can usually be sent within two weeks from the date of receipt of the samples. About one ounce of the grain is sufficient for the test, and the samples can be sent from any part of the Dominion to the Central Experimental Farm through the mail free.

WM. SAUNDERS,  
Director, Experimental Farms.
